FORMER PRESIDENTS SAIB

2016-2017	JOSE LUIS BOCCO
2014-2015	CARLOS ANDREO
2012-2013	LUIS MAYORGA
2010-2011	ALBERTO KORNBLIHTT
2008-2009	BEATRIZ CAPUTTO
2006-2007	NESTOR CARRILLO
2004-2005	ERNESTO PODESTA
2002-2003	NORMA STERIN DE SPEZIALE
2000-2001	RICARDO WOLOSIUK
1998-1999	DIEGO DE MENDOZA
1996-1997	RICARDO BOLAND
1994-1995	MIRTHA FLAWIA
1992-1993	ARMANDO J. PARODI
1990-1991	JUAN J. CAZZULO
1988-1989	HUGO MACCIONI
1986-1987	ISRAEL D. ALGRANATI
1984-1985	RICARDO FARIAS
1982-1983	JOSÉ SANTOME
1981-1981	HECTOR TORRES
1980-1980	JUAN DELLACHA
1979-1979	MARCELO DANKERT
1978-1978	FEDERICO CUMAR
1977-1977	ANTONIO BLANCO
1976-1976	HÉCTOR BARRA
1975-1975	RAÚL TRUCCO
1973-1974	ALEJANDRO PALADINI
1972-1972	HORACIO PONTIS
1971-1971	ANDRES STOPPANI
1970-1970	RODOLFO BRENNER
1969-1969	RANWEL CAPUTTO
1965-1968	LUIS F. LELOIR

IN MEMORIAM OF RODOLFO R. BRENNER

Rodolfo R. Brenner, professor emeritus at the National University of La Plata and founding director of the Institute for Biochemical Research of La Plata, died on 3rd July 2018. He was an illustrious scientist and teacher of many generations of biochemists, with a distinguished career for his important discoveries in the field of lipid biochemistry.

He was born on 17th July 1922 in Banfield, Province of Buenos Aires, Argentina. As an outstanding student, he graduated at the Colegio Nacional de Buenos Aires in 1940 winning three gold medals due to his academic achievements. In 1946 he graduated as Doctor in Chemistry at the School of Exact, Physical and Natural Sciences (FCEFyN), of the University of Buenos Aires (UBA), obtaining another gold medal as best graduate. He had his first contact with lipids by means of his doctoral thesis ‘Chemical composition of Argentinian olive oils’, directed by Prof. Dr. Pedro Cattaneo.

During 1946 and 1954 he worked for the Department of Bromatology and Industrial Analysis of FCEFyN, first as a Graduate Assistant and then as an authorized Professor. At the same time, he was in charge of the Section of Industrial Toxicology at the Institute of Medical-Technological Investigations and at the Institute of Public Health. In this first period he studied the composition of lipids of several freshwater fish, a subject in which he directed five doctoral theses and published a dozen of original papers, mainly in the *Annals of the Argentine Chemical Association* and in *Industry & Chemist*.

In 1954 he obtained a postdoctoral fellowship of the British Council to work on ‘Chemistry and Biochemistry of Lipids’ with Professor John A. Lovern at the Torry Research Institute of Aberdeen in Scotland. Upon his return, he obtained by competitive examination the post of Head Professor of the Department of Biochemistry of the School of Medical Sciences until the year 1988. Almost from scratch, he created a research group in this Department which in the mid 1960s reached wide international renown, in special because of his works on biosynthesis of polyunsaturated fatty acids. In 1961, when the career of scientific investigator of the National Scientific and Technical Research Council (CONICET) was created, Dr. Brenner was accepted as Independent Investigator, and after subsequent promotions he became Superior Investigator in 1973. Being a prolific investigator, he directed 45 doctoral theses. He was the author of over 300 scientific works published in national and international journals, as well as many other communications presented at different conferences and scientific meetings. He lectured over 150 conferences in different countries of America, Europe and Asia.

In recognition of his work and career, he received more than 30 awards, among which we can highlight: Award of FundaciónCampomar in 1972; Herrero Ducloux Award of the National Academy of Exact, Physical and Natural Sciences in 1974, Konex Prize granted to the best 5 biochemists of Argentina in 1983; Gold Medal “G. Burns and Von Euler” granted in London in 1985; Awards “Alfredo Sordelli” in 1985 and “JJ Kyle” in 1990 of the Argentine Chemical Association; Supelco AOCS Research Award of the American Oil Chemists’ Society in Baltimore in 1990; TWAS 2001 Award in Basic Medical Sciences of the Academy of Sciences of the Third World in New Delhi, India, 2002; 2009 Houssay Career Award in the area of Chemistry, Biochemistry and Molecular Biology in Buenos Aires, 2010; and the Distinguished Investigator of Argentine Nation, also in 2010. He was honorary member of the Society of Biology of Tucumán from 1987, of the Argentine Society of Biochemical Investigations (SAIB) from 1990, and of the Argentine Society of Biophysics (SAB) also in 1990.

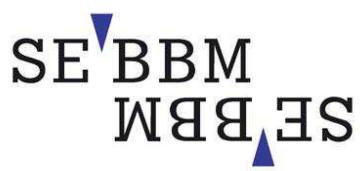

He was Senior Investigator Emeritus of CONICET and Head Professor Emeritus of UNLP. He held the position of Established Academic of the National Academy of Exact, Physical and Natural Sciences, of the National Academy of Sciences of Buenos Aires, and of the National Academy of Pharmacy and Biochemistry, as well as the Medicine Academy of Córdoba, Argentina.

It is worth mentioning his productive role in the management and promotion of science and university teaching. In 1965, together with Drs. Luis F. Leloir, Andrés Stoppani and Federico Cumar created the Argentine Society of Biochemical Research (SAIB), being its President in the period 1971-72. He was Counselling Director of CONICET, Adviser and Substitute Dean of the School of Medical Sciences, UNLP, and member of several scientific and academic committees of CONICET, UNLP, UBA and the Committee of Scientific Research (CIC) of the Province of Buenos Aires, Argentina. He was the South American representative at the Steering Committee of the International Conferences on the Bioscience of Lipids (ICBL). Among his achievements

and works, one of the most important ones was the creation (1982) and subsequent consolidation of the Institute of Biochemical Research of La Plata (INIBIOLP), of which he was the Director until 2003. Since 2015, this institution is called “Prof. Dr. Rodolfo R. Brenner” in recognition of his career.

He will remain for ever in the memory of all of us who had the privilege of knowing him and receiving his teaching.

Horacio A. Garda

11:00-11:30 COFFEE BREAK

11:30-12:30 PLENARY LECTURE

Andrés Aguilera

Role of chromatin and DNA damage response functions in R loop-mediated genome instability

Centro Andaluz de Biología Molecular y Medicina Regenerativa-CABIMER,
Universidad de Sevilla, España

Chairperson: Silvia Moreno

Room A

12:30-14:30 LUNCH

14:30-16:30 SYMPOSIA

Room A

MICROBIOLOGYSYMPOSIUM

Chairpersons: Monica Delgado and Jorgelina Morán Barrio

Jorge Diego Marco

Recombinant antigens of Leishmania for the immunodiagnosis and immunoprophylaxis of American tegumentary leishmaniasis

Instituto de Patología Experimental (UNSa-CONICET)

Augusto Bellomio

Study of the mechanism of action of lineal bacteriocins using suicide probes

Instituto Superior de Investigaciones Biológicas (UNT-CONICET)

Daniela Gardiol

Conserved mechanisms of viral pathogenesis: alterations of cell polarity and intercellular junctions

Instituto de Biología Molecular y Celular de Rosario (IBR)-CONICET, Facultad de Ciencias Bioquímicas y Farmacéuticas, Universidad Nacional de Rosario, Argentina

Hebe Dionisi

Brown algae polysaccharide assimilation potential in subantarctic sediments

Laboratorio de Microbiología Ambiental, Centro para el Estudio de Sistemas Marinos (CESIMAR-CONICET).

Room 1
PROTEIN KINASES SYMPOSIUM
Chairpersons: *Silvia Rossi and Daniela Albanesi*

Ricardo Biondi

Small compounds modulating bi-directional allostery in protein kinases: a new grip on an old trick?
IBioBA-CONICET-Partner Institute of the Max Planck Society; Frankfurt University Hospital (Germany)

Paula Portela

Role of PKA in protein translation regulation during adverse environmental growth conditions
Departamento Química Biológica-FCEN-UBA. IQUIBICEN-CONICET, Buenos Aires. Argentina

Virginia Novaro

Study of PI3K/AKT/mTOR pathway in breast cancer progression
Instituto de Biología y Medicina Experimental, IBYME-CONICET, Buenos Aires.

Viviana Castilla

Involvement of RAF/MEK/ERK cell signaling pathway in Junín virus replication
Depto. de Química Biológica, Facultad de Ciencias Exactas y Naturales, Universidad de Buenos Aires

Room 3
PLANT BIOTECHNOLOGY SYMPOSIUM
Chairpersons: *Maria Valeria Lara and Elina Welchen*

Raquel Chan

Successes and failures developing biotechnological tools in a model plant to improve crops. The long way from the growth chamber to the greenhouse and from the greenhouse to the field
Instituto de Agrobiotecnología del Litoral (UNL-CONICET) y FBCB (UNL).

Juan Carlos Diaz Ricci

The elicitor AsES regulates ripening and enhances protection in avocado and strawberry fruit
Instituto Superior de Investigaciones Biológicas (INSIBI, CONICET-UNT), Facultad de Bioquímica, Química y Farmacia, UNT.

Maria Victoria Busi

Different targets for the design of biomass of plants
Centro de Estudios Fotosintéticos y Bioquímicos de Rosario (CEFOBI-CONICET-UNR)

Marina Clemente

Molecular farming to produce vaccines against human and veterinary coccidian parasites: improving the antigen expression in plants
Laboratorio de Molecular Farming y Vacunas, Instituto Investigaciones Biotecnológicas-Instituto Tecnológico Chascomús (IIB-INTECH, sede Chascomús), Provincia de Buenos Aires, Argentina.

FLAVODOXIN REDUCTASES OF *Acinetobacter*. KINETIC CHARACTERIZACION AND RESPONSE TO REDOX STRESSORS

Palavecino-Nicotra MA, Sartorio MG, Cortez N

IBR-Instituto de Biología Molecular y Celular de Rosario, CONICET & UNR, Argentina. E-mail: palavecinonicotra@ibr-conicet.gov.ar

Ferrodoxin/flavodoxin NADP(H)-reductases (FPRs) are monomeric flavoenzymes carrying non-covalently bound FAD as cofactor, present in mitochondria, plastids and bacteria. Bacterial FPRs are classified in two groups that differ in the C-terminus structure. They are involved in reductive activation of enzymes and repair of Fe-S clusters after oxidative damage. Although most bacteria contain one of the two forms, some species carry both of them. The extremophile UV-resistant *Acinetobacter* sp. Ver3 conserved both FPR1 and FPR2 and a single flavodoxin. Here we report a biochemical characterization of the flavoenzymes and a study of their response to environmental factors as pro-oxidants or UV irradiation. Kinetic measurements under steady state conditions using flavodoxin as e- acceptor showed a faster electron transfer for FPR1 compared to FPR2 ($k_{cat1}=1.3 \text{ s}^{-1}$ vs. $k_{cat2}=0.5 \text{ s}^{-1}$) with a higher K_m for both flavodoxin ($K_m1=4.7 \mu\text{M}$ vs $K_m2=1.5 \mu\text{M}$) and NADPH ($K_m1=85 \mu\text{M}$ vs $K_m2=34 \mu\text{M}$). Challenge of *Acinetobacter* cells with superoxide propagators resulted in increased accumulation of FPR2 as revealed by immunostaining with specific antibodies. However, when cells were exposed to UV radiation, only FPR1 levels augmented. These data suggest that, although displaying similar catalytic efficiency, each FPR of *Acinetobacter* has a distinctive regulation mechanism in response to different stressors and redox stimuli.

LI-P01

TESTOSTERONE AND SOLUBLE FACTORS FROM SERTOLI CELLS STIMULATE SPHINGOLIPID SYNTHESIS IN GERM CELLS

Santiago Valtierra FX; Aveldaño MI; Oresti GM

INIBIBB, CONICET-UNS y Dpto. Biología, Bioquímica y Farmacia, UNS, Bahía Blanca, Argentina. E-mail: fsantiagov@inibibb-conicet.gov.ar

Germ cells from male rodents require membrane sphingomyelins (SM) and ceramides (Cer) with very long chain polyunsaturated fatty acids (VLCPUFA), in non-hydroxylated (n-V) and 2-hydroxylated (h-V) versions, for normal spermatogenesis. We have previously shown that spermatogenic cells isolated from seminiferous tubules of adult rats, in culture, are able to synthesize de novo the sphingolipids (SL) Cer, SM, and Glucosyl-Cer (GlcCer). Here, we evaluated the effect on such biosynthesis of supplementing the cultures with testosterone (T), with the supernatant medium recovered from primary Sertoli cell cultures (SMSC), and with both. Germ cells from adult rats were isolated and cultured in a medium containing [³H]palmitate as SL precursor. Label from this marker was incorporated into species of Cer and SM that contain saturated fatty acids (S), monoenoic fatty acids (M) and also in those containing n-V and h-V. In germ cells supplemented with T, while the labeling of Cer with [³H]palmitate was unaffected that of SM was increased in all the molecular species. Interestingly, supplementation with SMSC increased the synthesis of molecular species of Cer and SM with S, M and h-V, but not those with n-V. Finally, supplementation with both, T and SMSC, resulted in increased incorporation of [³H]palmitate in all Cer and SM molecular species. The biosynthesis of GlcCer was not influenced by T or SMSC. Thus, the de novo biosynthesis of the SM species of spermatogenic cells is subjected to endocrine stimulation by T and to paracrine regulation by soluble factor(s) released from Sertoli cells that are yet to be identified.

LI-P02

NEW INSIGHTS INTO LIPID METABOLISM OF *Haematococcuspluvialis* IN RESPONSE TO HIGH-LIGHT STRESS

Scodelaro Bilbao P¹²; Salvador G¹³; Leonardi P¹²

¹Dpto. Biol., Bioq. y Farm.-UNS, ²CERZOS, ³INIBIBB (UNS-CONICET). Bahía Blanca, Argentina. E-mail: pscodela@criba.edu.ar

The oleaginous unicellular microalga *Haematococcuspluvialis* is being intensely studied as a source of carotenoids and lipids with potential biotechnological and biomedical applications. The aim of this study was to analyze the effect of high-light stress on the regulation of triacylglyceride (TAG) and sterol synthesis in *H. pluvialis* UTEX 2505. After 24 hours of high-light exposure, both lipid classes significantly increased compared to the control condition. As expected, the use of inhibitors cerulenin, propranolol, xanthohumol and A922500 significantly decreased TAG synthesis under high-light stress, while mevastatin and 25-hydroxycholesterol reduced sterol content. These results together with qPCR and Western blot analyses revealed some of the enzymes of *H. pluvialis* involved in lipid synthesis in response to high-light. In addition, we observed that TAG inhibitors also reduced sterol content while sterol inhibitors diminished TAG production, denoting coordination between both synthesis pathways. Fosmidomycin, a specific inhibitor of the non-mevalonate pathway of isoprenoid biosynthesis, reduced total carotenoid content and antioxidant capacity together with TAG and sterol content. Finally, inhibition of carotenoid, TAG and sterol synthesis significantly reduced cell viability suggesting their participation in *H. pluvialis* survival and adaption to high irradiance. These findings reveal features of lipid synthesis and function of *H. pluvialis* under high-light stress, and points towards new possible molecular targets to enhance lipid production in microalgae.
